AB	The present invention relates to prepn. of novel essentially pure venlafaxine and solvate forms of venlafaxine hydrochloride. Furthermore, the present invention provides a novel process for prepg. venlafaxine hydrochloride from venlafaxine; the process comprises the steps of: (i) prepg. a mixt. of venlafaxine with acetone; and (ii) exposing the mixt. in gaseous hydrochloric acid. For example, cryst. venlafaxine free base was prepd. from N,N-didesmethyl venlafaxine hydrochloride and extd. with heptane. The venlafaxine base obtained reacted with hydrochloric acid and crystd. to generate venlafaxine hydrochloride of purity > 97%. Cryst. venlafaxine hydrochloride was then used for prepn. of solvate and polymorphic forms with solvent/antisolvent.

AB Prepn. of derivs. of venlafaxine, e.g., O-desmethylvenlafaxine, is
described. Also disclosed are methods of treating and preventing diseases
and disorders including, but not limited to, affective disorders such as
depression, bipolar and manic disorders, attention deficit disorder,
attention deficit disorder with hyperactivity, Parkinson's disease,
epilepsy, cerebral function disorders, obesity and wt. gain, incontinence,
dementia and related disorders.

AB A series of 2-phenyl-1-(1-hydroxycycloalkyl)ethylamine derivs. was examd. for the ability to inhibit both rat brain imipramine receptor binding and the synaptosomal uptake of norepinephrine (NE) and serotonin (5-HT). Neurotransmitter uptake inhibition was highest for a subset of 2-phenyl-2-(1-hydroxycyclohexyl)dimethylethylamines in which the aryl ring has a halogen or methoxy substituent at the 3- and/or 4-positions. Potential antidepressant activity in this subset was assayed in three rodent models-the antagonism of reserpine-induced hypothermia, the antagonism of histamine-induced ACTH release, and the ability to reduce noradrenergic responsiveness in the rat pineal gland. An acute effect seen in the rat pineal gland with several analogs, including 1-[1-(3,4-dichlorophenyl)-2-(dimethylamino)ethyl]cyclohexanol and 1-[2-(dimethylamino)-1-(4-methoxyphenyl)ethyl]cyclohexanol (I), was taken as a possible correlate of a rapid onset of antidepressant activity. Compd. I (venlafaxine) is presently undergoing clin. evaluation.
